

The Pro Netball Posts are made with ERW steel tubing with white powder coating finish. These posts are suitable for multi-purpose courts as they can be removed from the ground sleeve and have pre-drilled holes for both Junior and Senior net heights.

### Installation Recommendations

- Whilst installing the footings, ensure the stabilising bolt inside the sleeve is facing the correct direction. The lid should open away from centre court. The stabilising bolt should be perpendicular with the baseline. *(See diagrams)*
- The post should be placed so the back is flush with the outside edge of the goal line.
- We recommend concrete footings of 600mm (D) x 350mm (W).

**! IMPORTANT!**

**Always consult with a professional before installation.**
