

PRODUCT INSTRUCTIONS

360° Wheel Upgrade Pack

STEP 1.

Remove the existing four wheels from your VETO Sports goal along with loosening the front, bottom elbow joint to allow the four internal joiners to be removed.

At this point in time, it is good practise to clean out the groove down the bar to ensure there are no grass clippings or other foreign objects blocking the channel.

STEP 2.

Insert three joiners into each side - one positioned towards the back, one towards the front and one closing the join between the two pieces that were joined by the previous wheel.

A flat locking plate is used to provide a flat surface to proceed with securing the joiners/wheels as below.

For the front joiner, a flat plate and shorter screws with a flat, and spring washer are used to fix the joiner.

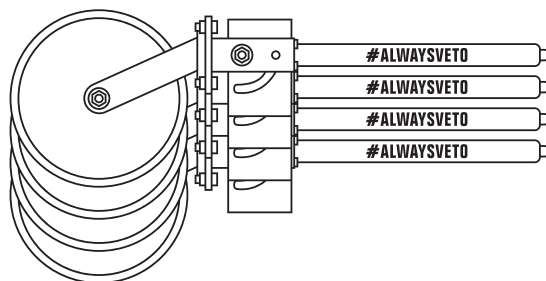

For the wheels, a flat plate and longer screws with a flat, and spring washer are used to fix the wheels to the joiner.

STEP 3.

To engage the 360° wheels, use the push button to safely lock and release the wheel mechanism.

You are now able to move the wheels from their resting position of flat on the ground, to raised.

We recommend two people put the wheels up and down to ensure that the goal is balanced during this process and the action is safe.
